

OUR BUSINESS STATEMENT 2021-22

RESOURCES

RENEWABLE SUPPLIES

- We focus on reducing our carbon footprint by reducing energy use. Our utilities suppliers support clean energy schemes and renewable sources. Our office operations are paperless wherever possible, favouring online and mobile applications over printed materials.
- Office supplies are chosen from vendors who promote recycled and ethically sourced products including Fair Trade tea, coffee, recycled bottled water and office packaging and stationary.
- Heat and lighting systems operate on thermostats in all office areas, with low energy lighting and automatic standby mechanisms to ensure efficient energy usage.
- Our office telephones use 50% less power than other standard phones in the industry
- Our chosen business waste collection service operates a 'zero-to-landfill' policy

SUSTAINABILITY

RESPONSIBLE USAGE

- We are minimising toxic emissions through the introduction of electric vehicles into our fleet in support of London-wide initiatives by TfL to reduce overall congestion.
- We ensure responsible disposal of all batteries, re-fill cartridges & electronic consumables.
- All cardboard/paper waste is recycled including warehouse packaging, office supplies and paper products used in printers, copiers, and rest room areas.

COMMUNITY

BIGGER PICTURE

- Our strategically located offices promote ease of public transport use for our staff and clients. We offer staff incentive schemes to reduce journeys made by car.
- We partner with local businesses as a priority to support community trades and services, and reduce transportation emission costs for goods.
- In partnership with the Local Authority we train, educate and inform our employees about environmental issues and support local green initiatives.
